

## INSTRUCTIONS TO AUTHORS

### **Aim and scope**

The Bulgarian Journal of Veterinary Medicine welcomes manuscripts on subjects devoted to theoretical and practical veterinary medicine aspects (including contemporary diagnostic methods, new approaches for control of infectious and parasitic diseases, veterinary microbiology, molecular biology and genetics, clinical pharmacology and toxicology, non-infectious pathology, reproduction, surgery, clinical cases).

BJVM will not consider manuscripts investigating the effects of plant extracts without quantitative analysis of the active substances, or manuscripts addressing well acknowledged problems associated to diseases, bacterial strains, parasites and haematological parameters in small-size animal study cohorts and breeds of local importance in limited geographic areas. Originality elements of manuscripts are mandatory.

Publication in BJVM is free of charge.

One or more authors may publish no more than two articles a year. Another manuscript will be considered for evaluation only after a decision on the preceding manuscript of the author.

### **Types of papers, published in the journal**

Original papers, reviews, case reports and short communications can be submitted to Bulgarian Journal of Veterinary Medicine provided that they:

- comply with the scope of the journal;
- contain original experimental data or new interpretations of existing results;
- correspond to the requirements of the journal;

- have not been published elsewhere.

BJVM does not accept research articles and case reports that have been already shared as preprints and have been assigned a DOI number.

### **Submission of manuscripts**

Manuscripts written in English are submitted electronically only through the online system at <https://mc04.manuscriptcentral.com/bjvm>.

### **Manuscript preparation guidelines**

Plagiarism, as a form of scientific misconduct, is not tolerated by the BJVM. The use of someone else's ideas or words in their original form is acceptable only with a proper citation. All submitted manuscripts will be evaluated with a plagiarism checking software and those found to use large portions of already published text or data will be refused publication.

**Review articles** should cover relevant subjects that are of current interest. All reviews should start with an introduction section and end with a conclusion section, with relevant headings between. Review articles should be always supported by original published data of the author(s).

**Original papers** should be organised in the following order:

- **Title.** The titles should be brief, corresponding to the subject of the manuscript and without abbreviations.
- **Authors' names, family name and affiliation.** The initials of their first and second names and full family names should be written.
- **Summary.** The summary should state briefly the essential information and paper contribution to the respective scientific topic.

- **List of key words**
- **Introduction**
- **Materials and methods**, including the ethical approval number of the experiment from the establishment where author(s) are working.
- **Results**
- **Discussion**. The conclusions might be included in "Discussion" or in a separate section "Conclusions".
- **Acknowledgements**
- **References**
- **Tables**
- **Figures**
- **Text to the figures**
- **Address for correspondence**

**Short communications** follow the same order of presentation but sections are not introduced by separate titles.

**Case reports** should present only original cases relevant to the veterinary practice and accompanied with a detailed and scientifically grounded discussion. Their structure is similar to that of short communications.

The requirements to the size of each article type are summarised below:

- **Reviews**: max. 10,000 words; abstract of max. 250 words; up to 60 references;
- **Original articles**: max. 7,000 words; abstract of max. 250 words; up to 50 references;
- **Short communications**: max. 5,000 words; abstract of max. 150 words; up to 25 references; up to 4 figures/tables;
- **Case reports**: max. 5,000 words; abstract of max. 150 words; up to 25 references; up to 5 figures/tables.

SI (Système International) should be used for all units of measure. Chemical formulae should be given according to the rules of International Union of Pure and Applied Chemistry (IUPAC); biological nomenclature – according to the Interna-

tional Code of Botanical Nomenclature, the International Code of Nomenclature of Bacteria, the International Code of Zoological Nomenclature; morphological names – according to *Nomina Anatomica Veterinaria* 6<sup>th</sup> ed., *Nomina Histologica Veterinaria* 1<sup>st</sup> ed., *Nomina Embryologica* 2<sup>nd</sup> ed., and *Nomina Anatomica Avium* 2<sup>nd</sup> ed; international nonproprietary names should be used for drugs, followed by trade name and the manufacturer in brackets.

**Tables and illustrations** (graphs, photographs, drawings) should be numbered in Arabic numerals according to their sequence in the text. Each table should have a title comprehensible enough without reading the text.

Graphs and drawings should be made with maximum clarity. Duplication of data from the tables is not accepted. Digital photographs should be with resolution at least 300x300 dpi. Preferred formats are \*JPG, \*TIFF, \*.EPS, \*.AI. The colour images are for the online version of the journal. The editorial office may request a clean set of photographs for design purposes. The scale of the figure is indicated at the right bottom by a line scale and the size is given in parentheses at the end of the figure caption, e.g. (bar = 10 µm).

**References**. The list of references should cover only publications that are closely related to the manuscript subject and are necessary to outline the foundation on which the research is built. Abundance of literature sources at the expense of their relevance and self-citation should be avoided. Approximately 30% of the references of submitted manuscripts should be published in the last five years.

In all citations in the text the author's family name and the year of the publication should be given e.g.: (Morris, 2017). If the authors are two, both names are referred to e.g.: (Barton & Moore, 2015),

and if they are 3 or more: the first author's name should be used, followed by "et al." e.g.: (Levi *et al.*, 2014). If several authors are cited, their names are chronologically arranged and if their publications are in one and the same year – alphabetically.

The arrangement of the publications should be done in alphabetical order according to the first author's name. If several publications by the same author are referred to, the following order should be used: publications of the single author, followed by publications with co-authors. Publications by the same author(s) in the same year should be listed as: 2015a, 2015b etc. Examples for the reference style are given below.

**Papers, published in journals:**

Budiati, T., G. Rusul, W. N. Wan-Abdullah, L.-O. Chuah, R. Ahmad & K. L. Thong, 2016. Genetic relatedness of *Salmonella* serovars isolated from catfish (*Clarias gariepinus*) and tilapia (*Tilapia mossambica*) obtained from wet markets and ponds in Penang, Malaysia. *Journal of Food Protection*, **79**, 659–665.

The Editorial Board does not accept the responsibility for inaccurate citations, including the content of webpages and/or

for infringement of principles of all kinds of copyright.

#### **Animal research ethics**

Studies performed on experimental animals should be carried out according to internationally recognised guidelines for animal welfare. These should be clearly described in the respective section "Material and Methods".

#### **AI policy**

AI tools to improve language, grammar, or structure, do not require disclosure by authors. On the contrary, use of AI for generation of incorrect text or content, generation of data or submission using a series of prompts, plagiarism or inappropriate attribution to prior sources, gene-

rated images that are presented as unique or novel research images or fabricated references is not allowed.

#### **Publication process**

The manuscripts are given to at least two reviewers for evaluation. The final decision about the publication is made by the Editorial Board and is announced to the authors.

*Revised by May 2026*
